

# Property Management Companies Rely on AppFolio's Web-based Property Management Software to Grow Even Faster.

We asked a few of our customers how they were able to grow their business with AppFolio's software. This is what they said...

## We doubled the size of our business since adopting AppFolio

"After adopting AppFolio as our management solution, we were able to double the size of our management portfolio. The quality of the product and support are unmatched. AppFolio has helped me grow my business because the accounting system is straightforward, logical and easily understood by employees and owners alike."

~ Eric Davis (President), Eric Davis Group

## We've signed over 1,000 new properties with AppFolio

"When I started with AppFolio I was at my wit's end managing 38 properties for friends and family. In January 2011, I decided to upgrade to AppFolio. By January 2012 I had 68 properties. By January 2013, over 200 and today May 31, 2013 I've signed up 1000 new properties. We've grown fast and still hold the highest overall customer satisfaction ratings in Colorado."

~ Grant Van Der Jagt (Owner), Denver Property Management

## I started with 5 properties....now I own and manage over 170!

"Anyone wanting to get beyond managing 5 properties, start with AppFolio as a foundation. You will not find a better industrial strength property management software that will allow you to scale your business like AppFolio has done. When I started with AppFolio, I had 5 properties, today I currently own and manage over 170 properties – my goal is to get to 400 units and open a second office location."

~ Steve Shwetz (Broker/Owner), Mesa Property Management

**These three businesses started small. AppFolio's web based software provided the right foundation for fast growth. Choose AppFolio to help your business:**
